The role of human-independent methodologies

Some **open issues** of traditional methodologies

- Which perspective to adopt? Dichotomy users vs producers of technology
- Which among rival technologies? Necessary commitment vs risk of early lock-in
- How to see through technology hype, promises or, sometimes, vested interests?
- How to overcome cognitive biases?
- How to detect weak signals, those even experts may not be aware of?

Of course continuous improvements, such as stakeholders involvement.

However, more quantitative methodologies, e.g. the analysis of patents and papers, offer an effective way to cross-validate expert-based analyses (and *vice versa*).

Where is the value in data-related techniques?

DATA MINING vs DATA INTERPRETATION

Copyright © 2019 by Erre Quadro s.r.l.

Choosing the right indicator

Scientific papers of course, what about **patents**?

- 80% of the **technical information** contained in patents is not available elsewhere (Terragno 1979, Kütt et al. 1998)
- Sometimes patents **anticipate publications** or launch in the market (even considering the 18 months window)
- Patents are costly, thus reflect companies' real **strategies**
- Patents contain information about **problems** to be solved, user **needs**, etc.
- Patent data are **easier to find** for any and all sectors

Copyright © 2019 by Erre Quadro s.r.l.

Choosing the right indicator

Different data sources for different information

- GitHub lists problems solved and to be solved in software-related areas, as much as patents do for technologies
- Startups and their promotional material may capture new trends in very dynamic sectors even better than patents
- Job offers are used to map the future need for skills but are not the only meaningful source

...

The accuracy issue

The **quality** of the patent (/data) search becomes then the limiting and crucial factor.

Detecting the right set of the patents (/data) related to a relevant technical area is the key for a successful analysis.

- A wrong definition of the search **focus** provides misleading or incomplete results.
- Inadequate **recall** loses important elements.
- Low **precision** and noise produce poor results.

Copyright © 2019 by Erre Quadro s.r.l.

Data-related issue

can (type of combustor) is also:

- to be able to (modal auxiliary)
- can bus
- cylindrical container
- preserve food

The innovation cycle

Technical performance S-Curve can be correlated to economic and inventive curves

Copyright © 2019 by Erre Quadro s.r.l.

The innovation cycle

A product in the declining stage: device for cancer therapy

2010

Cross check with doctors and with semantic analysis: too many collateral effects
Conversely the expert stated that this device was “the future”.

2016 Promises to cure every cancer have failed, reconverted to a very limited use nowadays, with no further innovation, in a niche where the game changer has not arrived yet

Topic 3: Winding and Rewinding devices

Description: web winders are used to form large parent rolls. From the parent rolls, rewinders are employed in order to wind the web material into a rolled product. Examples include techniques for monitoring and control of tension, wrinkle prevention, etc.

Topic 4: Folding of multi-ply products and tissue stacks

Description: selective folding or redirecting of multiply webs, particular implementations or production techniques of tissue stacks.

Predicting the emergence of new technologies...

Some years ago, the new wave in the world of **bed mattresses** was **memory foam**. Indeed wool mattresses are expensive and spring ones were uncomfortable... However the network of links between patents (and its time evolution) indicated that **metal springs were about to return**, specifically to improve the supporting performance. The client dismissed our indication saying “metal springs are dead”. Two years later, Permaflex launched a new line of microspring-based mattresses...

Technological Foresight of the mechatronic sector

Goal of the analysis:

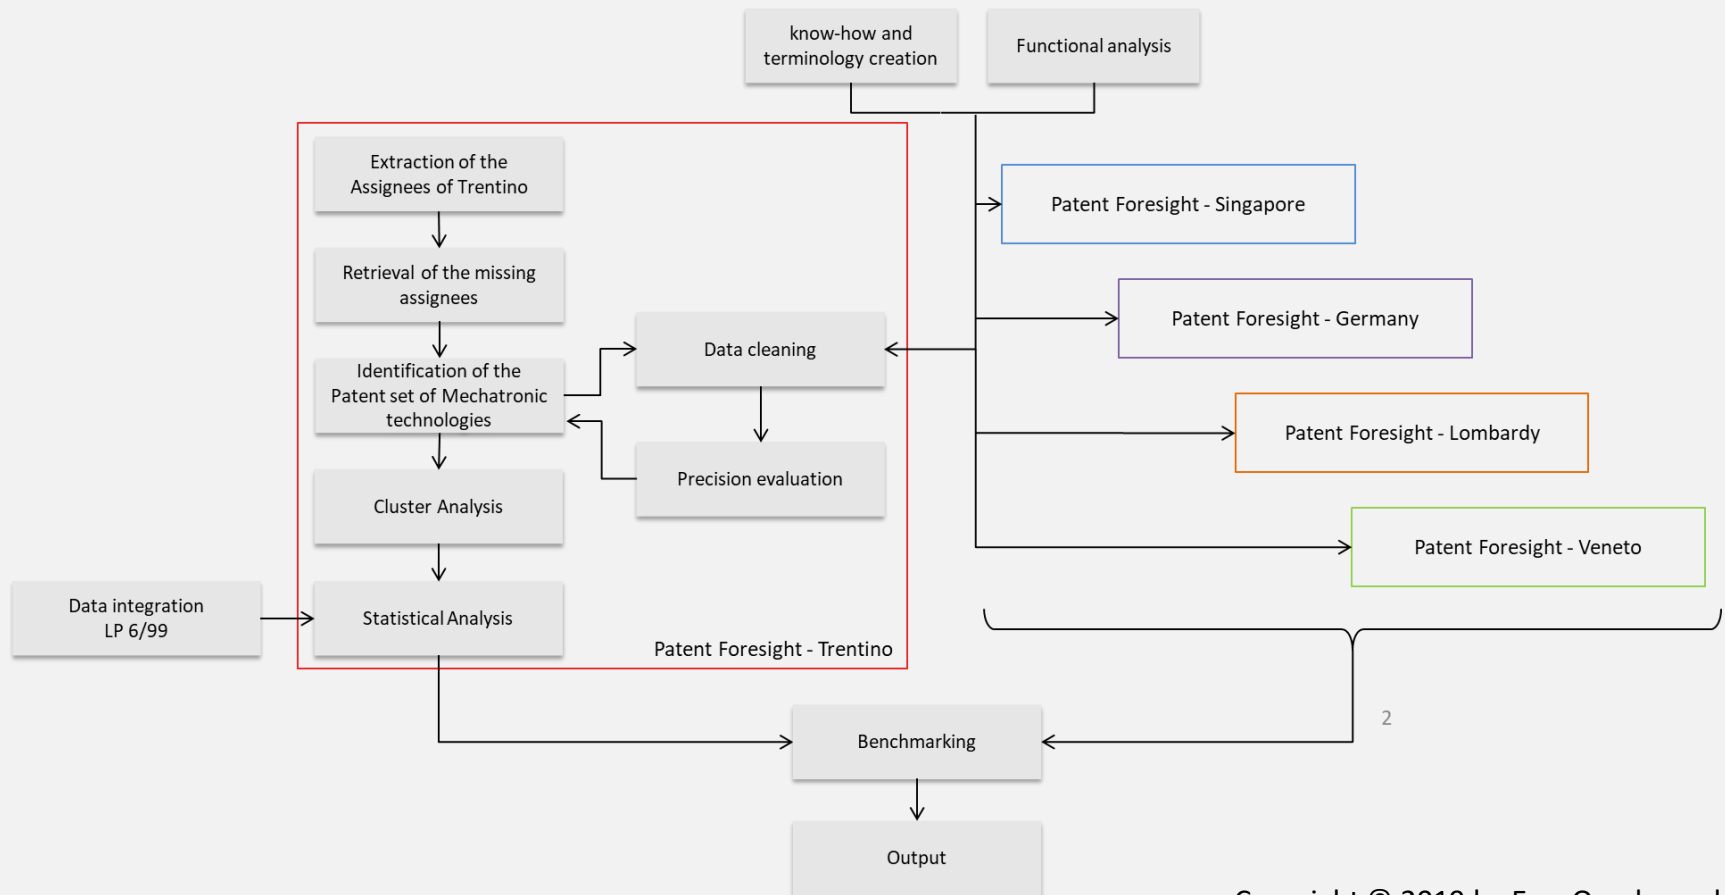

Provide insights about the **future trends** of the **mechatronic sector** to the Autonomous Province of Trento. The results will be used to formulate policies aimed at improving the territory's competitiveness.
